Chief Financial Officer

Michael Southern
Vice President, Human Resources

Business Overview

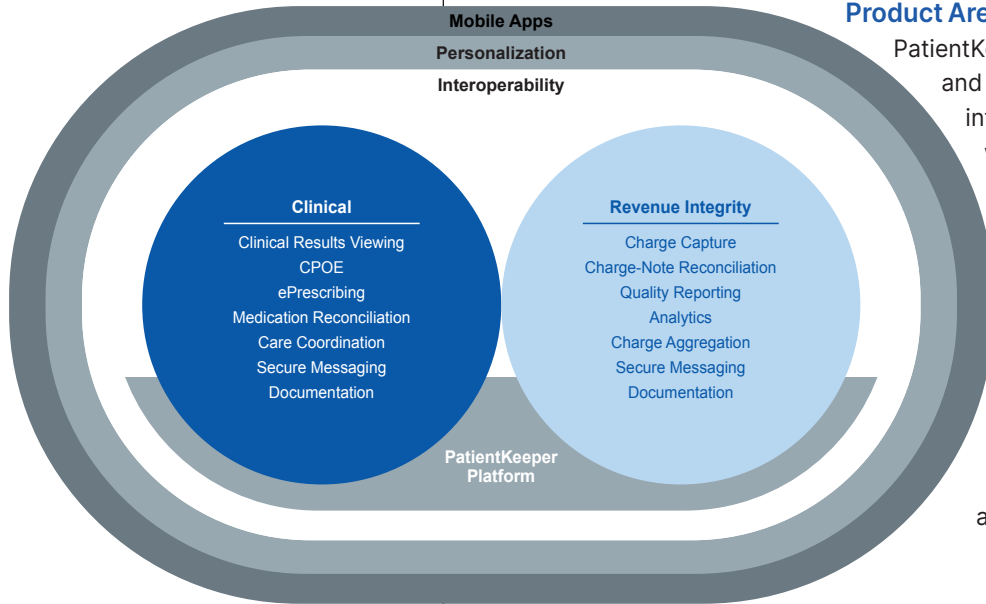

PatientKeeper® provides electronic health records (EHR) optimization software solutions that mobilize and streamline physician workflow, improve care team collaboration, and maximize revenue integrity for healthcare provider organizations. With PatientKeeper, providers can easily access and act on all their patient information in a single, intuitive and secure electronic environment – from PCs, smartphones and tablets – that is fully integrated with an organization’s existing clinical and transactional systems.

PatientKeeper is a division of Commure, a General Catalyst-backed company that is creating a universal platform for open, collaborative, and scalable innovation in healthcare. PatientKeeper’s specific focus is on enhancing clinical and revenue integrity workflows through instinctive, empowering technology that respects the importance of providers. This is a particularly vital endeavor since, to date, EHRs have impeded the care delivery process by creating more noise, less time with patients, and an extraordinary amount of provider frustration. To counter this unhealthy trend, PatientKeeper’s EHR optimization solutions are designed to advance the use of computers by physicians and care teams, and make them indispensable tools for 21st century clinical care.

PatientKeeper’s mobile-first clinical solution addresses the complete provider workflow, or any part of it, to shield providers from interacting directly with the hospital EHR. The foundation is intuitive clinical results viewing on mobile devices and via the web, plus secure messaging and provider sign-out; advanced clinical capabilities can be added, including clinical documentation, order entry, medication reconciliation, and e-prescribing. PatientKeeper’s revenue integrity solution has at its core a powerful charge aggregation capability for billers and coders that streamlines charge capture, cleansing and reconciliation, which accepts data from multiple EHRs, departmental and specialty systems, and charge capture applications.

PatientKeeper is the first company to offer a digital environment for providers that integrates with an organization’s existing transactional and clinical information systems

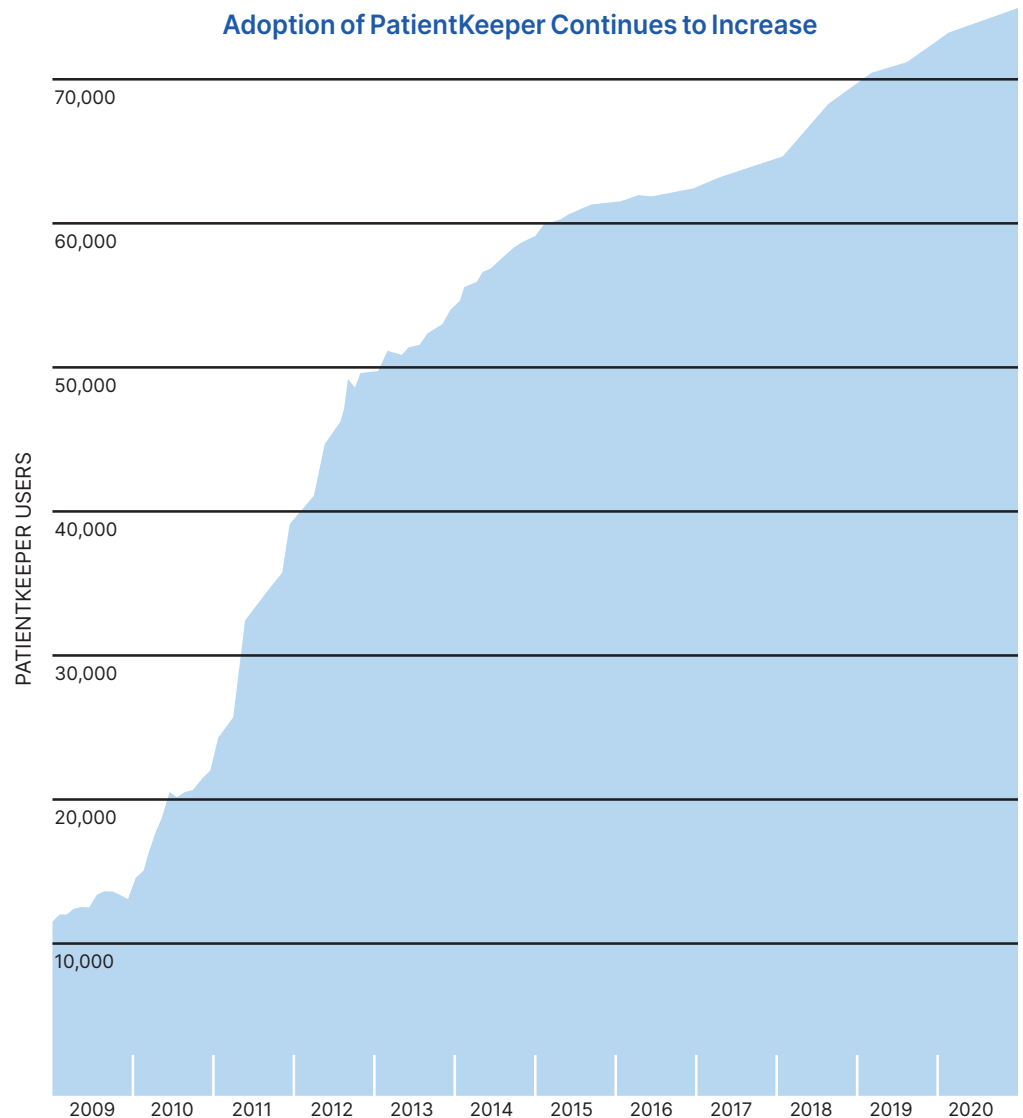

Product Areas

PatientKeeper solutions streamline provider workflow and improve provider organizations' revenue integrity. PatientKeeper's software runs on a wide range of platforms and devices used by providers within and outside hospitals, including smartphones, tablets like the Apple® iPad®, and laptop and desktop computers.

Customers

More than 75,000 providers, billers, coders and administrative personnel use PatientKeeper at over 350 healthcare provider organizations across North America and the UK.

Adoption of PatientKeeper Continues to Increase
