

Business Overview

PatientKeeper® Inc. provides electronic health records (EHR) optimization software solutions that streamline physician workflow, improve care team collaboration, and maximize EHR performance for healthcare provider organizations. With PatientKeeper, physicians can easily access and act on all their patient information in a single, intuitive and secure electronic environment – from PCs, smartphones and tablets – that is fully integrated with an organization’s existing clinical and transactional systems.

PatientKeeper’s mission is to advance healthcare with instinctive, empowering technology that respects the importance of physicians. This is a particularly vital endeavor since, to date, EHRs have impeded the care delivery process by creating more noise, less time with patients, and an extraordinary amount of provider frustration. To counter this unhealthy trend, PatientKeeper’s EHR optimization solutions are designed to advance the use of computers by physicians and care teams, and make them indispensable tools for 21st century clinical care.

PatientKeeper applications address the complete physician workflow, from customizing a patient list, to viewing patient records, medication reconciliation, order entry, clinical documentation, charge entry, secure messaging, e-prescribing, e-signature, and sign-out. The platform integrates third-party apps and data from multiple EHRs, embeds advanced clinical decision support (CDS) capabilities in a truly useful way, and provides an individualized experience for each user.

PatientKeeper is the first company to offer a digital environment for physicians that integrates with an organization’s existing transactional and clinical information systems
