

Streamline Provider Workflow with Tools that Actually Make Providers' Lives Easier

PatientKeeper offers a set of advanced, mobile-first capabilities that can be added, individually or in combination, to our core Clinical Communications Suite to further streamline provider workflow. Providers can create clinical documentation, enter orders, perform medication reconciliation, and e-prescribe home medications upon patient discharge, in the same intuitive platform they use to access complete patient records and collaborate with their care team colleagues – without ever directly touching the underlying EHR system.

PatientKeeper's system of engagement for providers was designed with provider workflow in mind, so it's intuitive and efficient to use.

Highlights

- **NoteWriter** – The clinical documentation app that offers providers unparalleled flexibility on phones, tablets, and computers
- **CPOE** – Efficiently order meds, labs and radiology from a computer or mobile device with fewer clicks, taps and screens
- **Medication reconciliation** – Electronically track, maintain or adjust patient meds at each transition of care, from admission through discharge
- **ePrescribing** – Completes the electronic discharge med rec workflow by ordering a patient's home meds from their local pharmacy

NoteWriter

PatientKeeper NoteWriter enables providers – using just a few taps or clicks – to quickly and easily create robust, complete, daily progress notes and other encounter documentation. Notes are based on customizable templates and can be automatically populated with your patient's demographic and clinical information.

NoteWriter offers a number of key features to help expedite recording notes, including:

- Customized note types
- Quick text
- Integrated links to clinical data
- Integrated problem list

With NoteWriter, providers save valuable time and create easily referenced documentation that ultimately enables them to spend more time with their patients.

CPOE

PatientKeeper's CPOE solution presents providers with easy access to personalized, evidence-based order sets, as well as commonly used daily orders. Flexible alert management allows the hospital to distinguish critical alerts that should interrupt the ordering process from those that should simply inform the physician, without requiring an action or response.

PatientKeeper CPOE:

- Allows users to build order sets and “order strings” that reflect the way individual physicians practice medicine
- Contains features that actually make the ordering process faster and easier
- Enables anytime/anywhere order entry on phones, tablets, and computers
- Offers back-end system flexibility and versatility

Medication Reconciliation

PatientKeeper Medication Reconciliation makes it easy for providers and other clinicians to electronically track and transition patient medications from home to hospital at time of admission, and back to the home at time of discharge. PatientKeeper makes it easy and efficient for physicians to distinguish between medications that came with the patient from home from those that have been prescribed upon admission. The system also automatically matches home and hospital medications, including brand/generic and therapeutic class matching, and allows the physician to easily continue the home or hospital therapy with a single click – no more “manual reconciliation” and matching.

ePrescribing

PatientKeeper ePrescribing completes the physician's inpatient discharge workflow, integrated with the electronic discharge med rec process to ensure accuracy and patient safety. ePrescribing not only saves time in the transmission of prescriptions to the pharmacy, it ensures information is complete and reduces errors from translation of handwriting and keying in prescription details, thus eliminating the need for call-backs to physicians. In addition, PatientKeeper checks that all orders needing new prescriptions have them. As part of a fully-electronic discharge medication reconciliation workflow, ePrescribing reduces adverse drug events and improves medication adherence. Patients are more likely to take their medications if they have been prescribed drugs they can afford and if those medications are waiting to be picked up at the patient's preferred pharmacy. PatientKeeper ePrescribing is integrated with Surescripts, and is certified for EPCS.

About PatientKeeper®

PatientKeeper software optimizes healthcare providers' EHR systems to streamline physician workflow, improve care team collaboration, and maximize business and EHR performance. Using PatientKeeper, physicians can easily access and act on all their patient information in a single, intuitive and secure electronic environment – from smartphones, tablets and PCs – fully integrated with a hospital's existing clinical and transactional systems. PatientKeeper is used by more than 75,000 physicians at hospitals and health systems across North America and the UK.
