**(8) PatientKeeper®**

PatientKeeper's mobile and desktop solution to streamline providers' clinical workflow starts here.

The foundation of PatientKeeper's clinical workflow solution for providers is the Clinical Communications Suite. It features a set of capabilities accessible on mobile and desktop devices designed to make it easier and more efficient for providers to access patient information and collaborate with their care team colleagues. And the PatientKeeper platform meets the highest security standards required in healthcare environments today.

Highlights

Clinical Communications Suite features these valuable capabilities for providers:
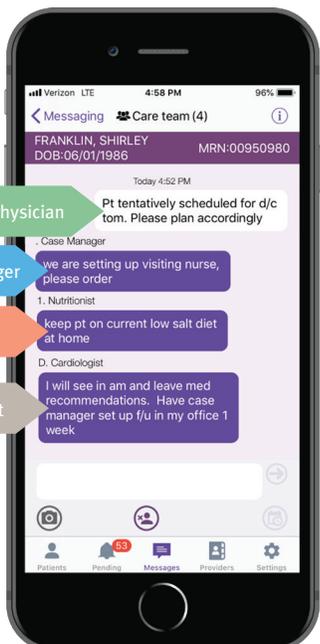

- **Clinical Results Viewing** – delivers a complete view of a patient's clinical record on a phone, tablet or computer, aggregated from multiple clinical systems

- **Secure Messaging** – a secure, real-time communication tool that enables text chat among providers and other users

- **Sign-Out** – automatically transfers the patient list and all outstanding tasks to the covering provider

Clinical Results Viewing

PatientKeeper gives providers anytime, anywhere access to a comprehensive set of clinical data stored in the hospital EHR or departmental systems, from any iOS and Android mobile device or Web-connected computers. PatientKeeper brings all of the patient's clinical data together; no need to sign into multiple computers in multiple locations throughout the day. Information available through the PatientKeeper app includes:

- Patient list
- Lab and test results
- Medication list
- Clinical notes
- Problem list
- Vital Signs and I/Os
- Allergies
- Order status

Secure Messaging

Timely communication among members of a care team is critical to providing great patient care. Since team members are rarely all in the same place, at the same time, it's vital that they can communicate anytime, anywhere. The PatientKeeper Clinical Communications Suite enables secure, HIPAA-compliant messaging embedded within a provider's workflow with access to the patient's entire electronic medical record.

Oftentimes a text update itself isn't enough to arm care team members PatientKeeper Messaging enables users to include in-context information such as lab results, a photo of a wound that requires consult, or radiology images can save time by eliminating unnecessary back and forth and enable more efficient communication with physicians who may be off-site. In addition, PatientKeeper can be integrated with a hospital's on-call scheduling system to ensure easy access to the appropriate consultant.

Sign-Out

Sign-Out provides a continuity of care that facilitates faster discharges, enhances patient safety, and aids compliance with Joint Commission patient safety requirements.

Providers begin with a manageable summary, including condition updates, code status, problems, pertinent tests and treatments, and to-do items sorted by priority. Covering physicians know at a glance how to prioritize patient needs. At shift end, Sign-Out allows providers to quickly log tasks, patient care details, problems, pertinent tests, and other information that will be needed by covering physicians at hand-off.

Sign-Out presents a complete list of all of the tasks a clinician must do to provide quality care to the patient. These can be defined at admission, during rounds, or after a patient encounter. The covering provider knows what to do – whether it's checking admission labs, consulting a cardiologist, ordering a medication, or changing a dressing. Sign-Out ensures faster, more efficient care and eliminates redundant work.

An EHR optimization solution

The Clinical Communications Suite is one of PatientKeeper's EHR optimization solutions. It integrates with an organization's existing clinical IT infrastructure to fill functional gaps and improve ROI. With PatientKeeper complementing your EHR, your facility will be able to offer more collaborative patient care that produces better outcomes, in the process improving patient and provider satisfaction.

Key Features

- Versatile patient list
- Embedded e-signature capability
- Secure, encrypted, HIPAA-compliant messaging
- Open APIs allow messages to be sent to and from third-party applications or systems
- Fully integrated with all MEDITECH® and MEDHOST® acute care EHR systems, and many ambulatory EHR and practice management systems

PatientKeeper®

About PatientKeeper®

PatientKeeper software optimizes healthcare providers' EHR systems to streamline physician workflow, improve care team collaboration, and maximize business and EHR performance. Using PatientKeeper, physicians can easily access and act on all their patient information in a single, intuitive and secure electronic environment – from smartphones, tablets and PCs – fully integrated with a hospital's existing clinical and transactional systems. PatientKeeper is used by more than 75,000 physicians at hospitals and health systems across North America and the UK.
