

# CHARGE CAPTURE OFFICE EDITION

## Introducing Electronic Charge Capture for Physician Practices

Now physician practices of any size can capture their professional charges electronically using an affordable, easy to install hosted version of the intuitive software that leading hospitals and health systems find so helpful:

*PatientKeeper® Charge Capture™.*

Manual, paper-based charge processes – with multiple hand-offs and points of failure – cost organizations thousands of dollars each year. Physicians typically spend an inordinate amount of time managing encounter forms and index cards with multiple patient lists in order to submit charges in an accurate, compliant and timely fashion. Even provider organizations that have sophisticated EHRs in place often find those systems have inefficient professional charge capture functionality and versatility.

PatientKeeper Charge Capture automates the billing process from within your physicians' existing workflow, allowing you to increase revenue with a more efficient and effective charge capture process.

### Product Highlights

- Automates the entire billing workflow from charge capture through billing
- Increases cash flow
- Reduces lost charges and charge lag
- Improves coding compliance
- Minimizes billing rework from incomplete or illegible charges
- Supports all devices such as tablet PCs, laptop/ desktops, and smartphones
- Fully-hosted solution – no IT infrastructure required
- Integrates with existing practice management and billing systems

### Increasing Revenue, Improving Cash Flow

For nearly 20 years, PatientKeeper Charge Capture has been the automated billing workflow solution that easily fits a clinician's work style, enabling providers to record charges for services they deliver quickly and easily – at the point of care, in the office, or anywhere in between.

Physicians can view and select the appropriate ICD-10 diagnosis codes with the confidence that their selections will be mapped to the appropriate billing codes upon submission. Real-time code edits check for common coding errors and alert physicians at the time of charge entry. A comprehensive array of code edits, including CCI- and LCD-based edits in addition to client-developed rules, results in far fewer instances of costly resubmissions that miss the claim-submission window. Charge Capture also identifies potentially missed charges and reduces defensive "down-coding."

### Benefits to Physician Practices

- Solution includes physician charge capture and backend billing/coding verification tools
- Easy contracting and rapid deployment
- No IT infrastructure required – PatientKeeper Charge Capture-Office Edition is a fully hosted solution
