Access Patient Clinical Data Anywhere From the Latest Smartphones and Tablets

Rapid Access At The Point of Care and Anywhere
For clinicians, the challenges only seem to grow. You need to see more patients, track more tests and clinical data, and stay abreast of more information than ever before – all while ensuring patient safety and high-quality care. How can you stay on top of a growing array of data, sidestep the gauntlet of disparate information systems, and avoid getting bogged down in administrative tasks all without being tethered to a workstation or your office?

PatientKeeper® Mobile Clinical Results™ is the answer.

Supporting Physician Adoption of HIT
Physicians are avid users of smartphones; nearly every doctor has one. The growth and sophistication of mobile devices has led to continued demand for and use of mobile clinical workflow applications. PatientKeeper remains on the forefront of this trend by offering physicians:

- **Access to any data on any device.** The number and complexity of device options will continue to grow. PatientKeeper aggregates data from disparate systems for mobile access via the broadest set of devices on the market.

- **Support for browser and native access.** PatientKeeper provides true mobile access from within a powerful mobile platform, in both a connected and disconnected state.

- **The highest security standards.** Storing PHI on a mobile device poses unique security challenges. PatientKeeper encrypts PHI both in transit and at rest, decrypting data only as it is displayed on the device.

Product Highlights
- Provides “one-tap” access to your patients’ clinical information — anytime, anywhere.
- Delivers a complete view of a patient's clinical record aggregated from multiple clinical systems.
- Improves patient care by ensuring that providers have the most up-to-date information about their patients regardless of where they are.
- Streamlines rounding by eliminating “chart chase” and the need to log into terminals to access patient information.
Comprehensive Clinical Information
PatientKeeper Mobile Clinical Results gives you anytime, anywhere access to a comprehensive set of clinical data from virtually any device:

- **Patient List** – See an accurate, up-to-date list of your patients and their current locations to streamline rounds.
- **Lab Results** – Access and trend lab results and quickly see out-of-range values and review annotations.
- **Test Results** – Quickly review microbiology, radiology, pathology, and other text-based results – all in one place.
- **Medication List** – Review the patient’s current medications (including IV meds and split/linked orders) and see a history of discontinued meds. If your health system has electronic medical administration (eMAR), you can also see the complete dispensing history (including skipped doses).
- **Clinical Notes** – View all clinical notes including admit, progress, consult, discharge, and operative notes.
- **Problem List** – Track the patient’s clinical problems and share them with other providers, treating the patient while streamlining the charge capture process.
- **Vital Signs and I/Os** – Review the patient’s current condition with an at-a-glance presentation of temperature, blood pressure, heart rate, and other vital signs as well as input/output measurements.
- **Allergies** – Review patient’s known allergies, including substance, type (drug, food, or environment) and a description of any reaction.
- **Order Status** – Monitor the status of all recent orders on the patient. Place, reorder and stop orders directly from your device (requires PatientKeeper CPOE).

Access Anytime, Anywhere
Mobile Clinical Results brings all of the patient’s clinical data together for you on your smartphone or tablet. It eliminates the need to sign into multiple computers in multiple locations throughout the day and lets you focus on what matters most: the clinical encounter with your patient. It also supports you while you are out of the facility – access information in the car, at a soccer game, or anywhere. Receive a call from a floor nurse about a patient? Pull up that patient’s record and immediately see current information on the patient’s condition. No need to have the nurse read the clinical results to you.

Personalize to Your Work Style
You can personalize the appearance and workflow of Mobile Clinical Results screens and modules to reflect your requirements, specialty, and work style. You can display and trend lab results in a variety of popular formats – including lists, graphs, tables, or fishbone diagrams for common lab panels. You can even assemble customized lab panels such as a Cardiac Risk Profile comprised of tests across multiple lab panels.

About PatientKeeper
PatientKeeper® Inc. is the leading provider of healthcare applications for physicians. PatientKeeper’s highly intuitive software streamlines physicians’ workflow to improve productivity and patient care. PatientKeeper’s CPOE, physician documentation, electronic charge capture and other applications run on desktop and laptop computers and popular handheld devices and tablets. PatientKeeper’s software integrates with many existing healthcare information systems to effectively support healthcare providers in adopting technology, meeting MACRA requirements, and transitioning to value-based care. PatientKeeper has more than 60,000 active physician users today.
