

NOTEWRITER

Reducing the Time it Takes for Physicians to Write Clinical Notes

From Paper to Electronic

It's a fact: physicians are required to document the time they spend with patients. Physician notes communicate a patient's condition, progress, and treatment plans to other caregivers, they substantiate billing, and they are historically dictated or handwritten. But relying on dictation can be costly, and transcription is not always feasible, especially for daily progress notes, which are high in frequency and require quick turnaround. Relying solely on paper, with its obvious limitations, isn't the answer. Attempts to automate this process to date have failed as traditional documentation systems err toward one extreme or another - imparting too much structured text and eroding the value of the clinical narrative or too little structure, turning physicians into typists and taking them away from direct patient care. How can your physicians easily and efficiently create electronic notes, with a tool they will actually want to use?

PatientKeeper® NoteWriter™ is the answer.

Product Highlights

- Replace paper with more accessible, legible, and trackable electronic notes
- Save time documenting high-volume transactions such as daily progress notes
- Decrease or eliminate transcription costs and potential for error
- Integrate with existing clinical data to construct complete documentation
- Combine with basic validity checking to increase billing documentation accuracy and completeness

PatientKeeper NoteWriter enables clinicians – using just a few mouse clicks – to quickly and easily create robust, complete, daily progress notes and other encounter documentation. Notes are based on user-specific templates and can be automatically populated with your patient's demographic and clinical information.

Time-Saving Features

PatientKeeper NoteWriter offers a number of key features to help expedite recording notes, saving physicians valuable time, providing easily referenced documentation and ultimately enabling physicians to spend more time with the patient.

These features include:

- **Customized Note Types** – Create customized templates for common notes (such as Progress Notes) that include links to relevant clinical data. Physicians can personalize templates “on-the-fly.”
- **Quick Text** – Menus of previously defined, commonly-used words and phrases – to save time. Physicians can create QuickText in advance or while in the process of creating a note.
- **Leverage Yesterday’s Note** – Physicians can re-use and edit portions of yesterday’s note to facilitate continuity of care and save time documenting subsequent encounters.
- **Integrated Links to Clinical Data** – One of the most powerful features of NoteWriter is its ability to import lab results, medications, test results, vital signs, I/Os and more directly into the note. For example, NoteWriter can automatically populate the Objective section of your progress note with the patient’s current medications and lab data.
- **Integrated Problem List** – NoteWriter helps physicians meet Meaningful Use Objectives by maintaining a comprehensive list of current and active problems as a by-product of documentation. As problems are added to a note, they are automatically added to the patient’s comprehensive list of problems.

Integration with your Hospital EHR

You can integrate notes created in NoteWriter directly into your existing system of record. Or, if you do not yet have an electronic chart, you can automatically print them on a central or local printer and add them to the paper chart. Of course, the notes are always available in PatientKeeper for easy access.

Integrated Workflow with Charge Capture

NoteWriter is designed to fully and easily integrate with other PatientKeeper applications, including *PatientKeeper® Charge Capture™*, the most widely adopted solution for intuitive and flexible automated billing. Physicians can document and charge within one integrated workflow. Sharing information between the note and associated charges – such as service date or diagnoses – streamlines the charge capture process and improves accuracy. In addition, the system validates the selected code against billing guidelines.

Whether starting with one product or leveraging the entire PatientKeeper integrated suite of applications, physicians and other caregivers can receive the automation support they need throughout the patient care lifecycle.
